# DUTCH HOSPITALITY DESIGN

SATELLIET HAVE BEEN DESIGNING AND MANUFACTURING FURNITURE FOR AROUND 47 YEARS FOR THE LEISURE AND HOSPITALITY INDUSTRY. WE ARE ALWAYS WORKING TOGETHER WITH DUTCH DESIGNERS, WHO ARE RESPONSIBLE FOR CREATING NEW DESIGNS FOR OUR COLLECTION. THERE ARE ALSO SOME INSPIRING DESIGNS FROM THE PAST IN THIS CATALOGUE. DISCOVER THE DESIGNERS AND THEIR UNIQUE PIECES AS INSPIRATION FOR YOUR NEXT PROJECT.

## JAN DIJKSTRA

In 2005 Jan Dijkstra graduated from the Design Academy in Eindhoven as an Industrial Designer. With his graduation project, a modular kitchen made of wire steel, he showcased his love for this material. By making full use of his creativity and imagination, Jan brings his designs to life.

## YLFÍ

The inspiration for the Ylfi comes from nature. The fragile structure of the wings of a dragonfly lies at the base of the design. The name is not chosen by chance. If you reverse Ylfi there is I fly.

**MY DESIGN STYLE IS  
FRIENDLY, MERRY,  
SYMPATHETIC AND  
ALWAYS A TOUCH  
PERSONAL.**

JAN DIJKSTRA

## NORWE

The Norwe is characterized by its minimalist appearance without sacrificing seating comfort. The friendly round shapes and transparent back make the Norwe easy to use in any interior without infringing on the optical space.

## OLYN

What immediately stands out about the Olyn is the way in which the metal frame playfully embraces the seat and back of this design. The round shapes not only look friendly and cheerful, it is also a compact and distinctive design.

**THE OLYN NAME  
COMES 'OLIJK', WHICH  
MEANS FANTASTIC OR  
FUN AND FOR ME THE  
MERRY CHARACTER OF  
THE DESIGN  
UNDERLINE.**

JAN DIJKSTRA

## JONATHAN HOFMEIJER & BABKE DEKKER

This designer duo started a studio together in 2011 after they have graduated from the Design Academy in Eindhoven. Their motto is "a design only comes to life when it is used", whether it be products or complete interiors. In addition, Jonathan focuses on the details while Babke takes care of the charisma.

## 25.25

Jonathan and Babke designed a stackable patio chair on behalf of Satelliet, which later became a complete furniture range: the 25.25 series. Named after the dimensions of the materials used: tubular profiles of aluminum of 25 x 25 mm.

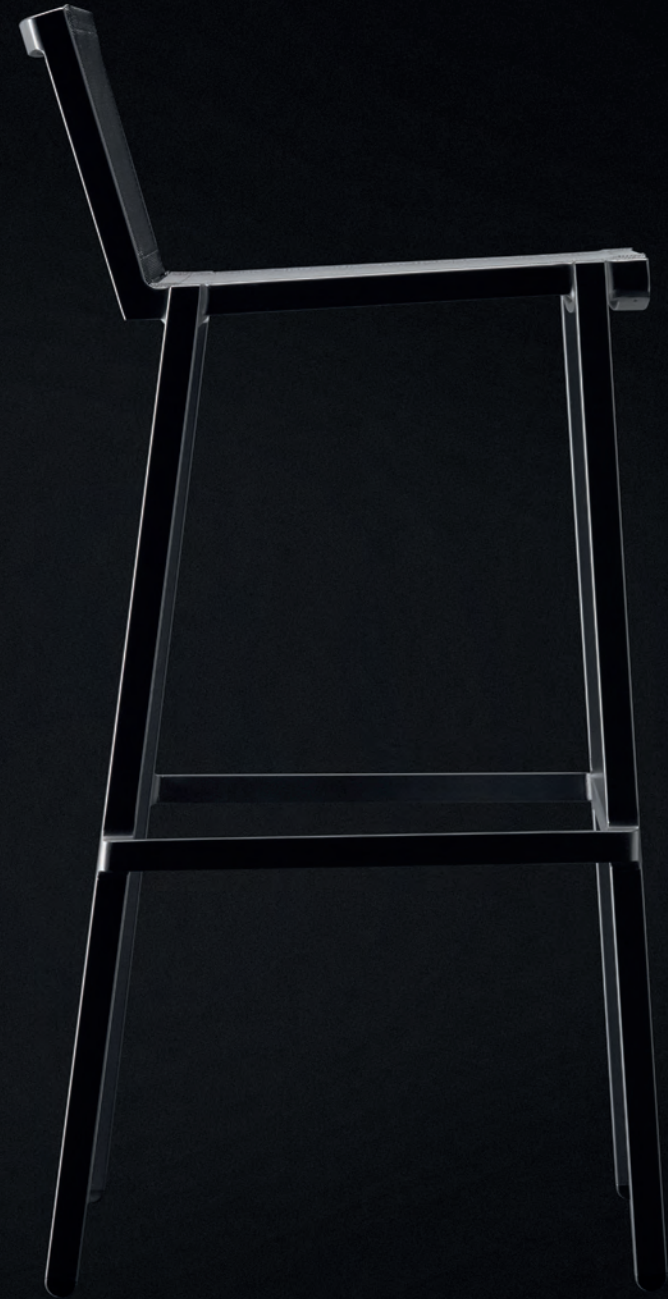

**A GOOD MODEL SHOULD NOT  
ONLY FEEL NEW, BUT  
SHOULD BE ACCESSIBLE AT  
THE SAME TIME. IT SHOULD  
LOOKS LIKE IT HAS  
JONATHAN HOFMEIJER &  
BABKE DEKKER  
ALWAYS BEEN.**

JONATHAN HOFMEIJER & BABKE DEKKER

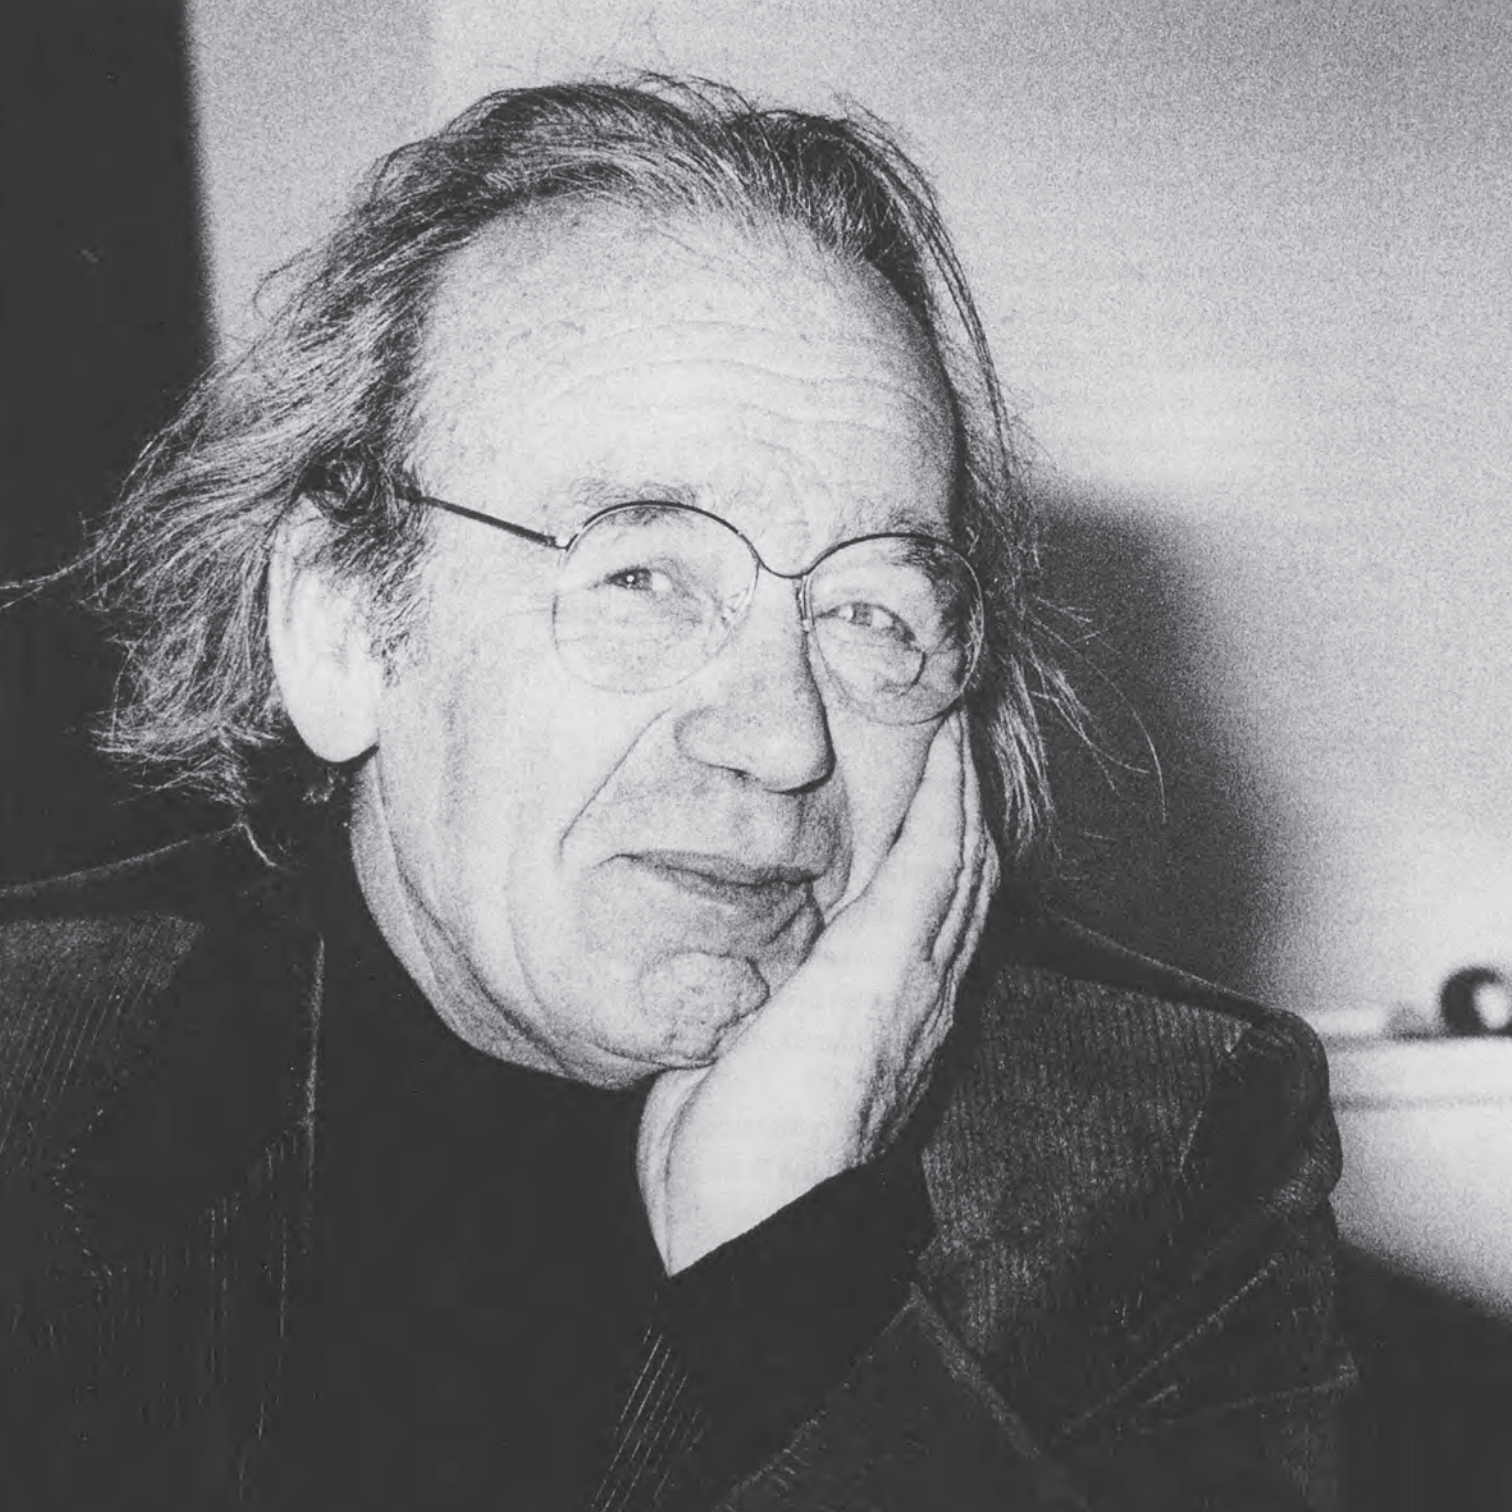

## STEELWOOD

The design of the Steelwood is simple and good-looking, but also surprisingly comfortable. Through the use of "socks", the ranges looks very unique

## DIRK VAN SLIEDREGT

(1920-2010)

We know Dirk van Sliedregt as furniture designer, interior architect and teacher. He is the first person to come up with the combination of rattan seating elements on a steel tubular frame. Ultimately, his impressive oeuvre will consist of more than 250 models.

Chair 550 for Jonkers Meubelen was registered in 1952 and is now produced under license by Satellite Furniture.

## 550

The 550 series consists of a chair, armchair and stool. Made with an aluminum frame, and a high quality plastic braid seat and back. This makes this series also applicable outside. Original bakelite armrests provide the finishing touch.

550 HS

## TOM FRENCKEN

His designs often have a quirky appearance. Tom Frencken studied interior architecture and furniture design at the KHM in Mechelen. Since 2007 he has been working from his own studio on free work and assignments. Frencken makes timeless furniture with a high quality that, as he says, needs to be able to join several generations.

## FOLD

"The challenge is to devise efficient models that are easy to produce, without sacrificing the form. That is the power of the Fold. Sharply cut foam blocks that snap into a tubular frame."

**I WANT TO EXPERIENCE  
ANY FACET OF THE  
DESIGN FIRST.  
THEREFORE, I ALWAYS  
BUILD MINI  
PROTOTYPES!**

TOM FRENCKEN

## LANDER

"In my work I am always looking for contrasts. This does not only have to be in shape, but can also be in the choice of material. As with the Lander where the metal contrasts with the wood."

## LEGS

Frencken designs often have a cartoonish-looking twist. With this design, the clear shapes and the rounded lines give the table a distinctive character.

## STUDIO SATELLIET

Chris Montijn and Wessel Storms, both part of the design team that works under the name Studio Satelliet, can be found in the factories of Satelliet. There they can almost literally turn the knobs and follow the dynamic process from design to production closely.

## PRESS

Sustainability plays an increasing role in the designs of Studio Satelliet. With the felt shell of the Press as a striking example. The Press feels like an upholstered chair, largely consisting of recycled PET bottles.

## GERLIN

Conical legs and compact, slightly curved seat and back elements form the basis for the design of the Gerlin. The collection leaves plenty of room for a 'personal touch' in frame-finishing and upholstery.

## GIROLA

The strength of the Girola chair is in the simplicity. Thanks to the thick-walled but light aluminum frame, the design with its minimalist design is extremely suitable for heavy use.

**IN OUR DESIGN PROCESS IS  
THE APPLICABILITY FOR  
THE HOSPITALITY SECTOR  
IS CENTRAL.  
THAT IS NOW IN OUR  
GENES.**

STUDIO SATELLIET

## FLASH

The solid beech wood frame carries a seat and back of curved plywood. The Flash series is the most extensive model series developed by Studio Satelliet.

## MINO

The Mino is a robust design that is characterized by its simplicity. The extra thick tubular frame and the convex seat and back come into their own beautifully and also ensure a wonderfully comfortable seat.

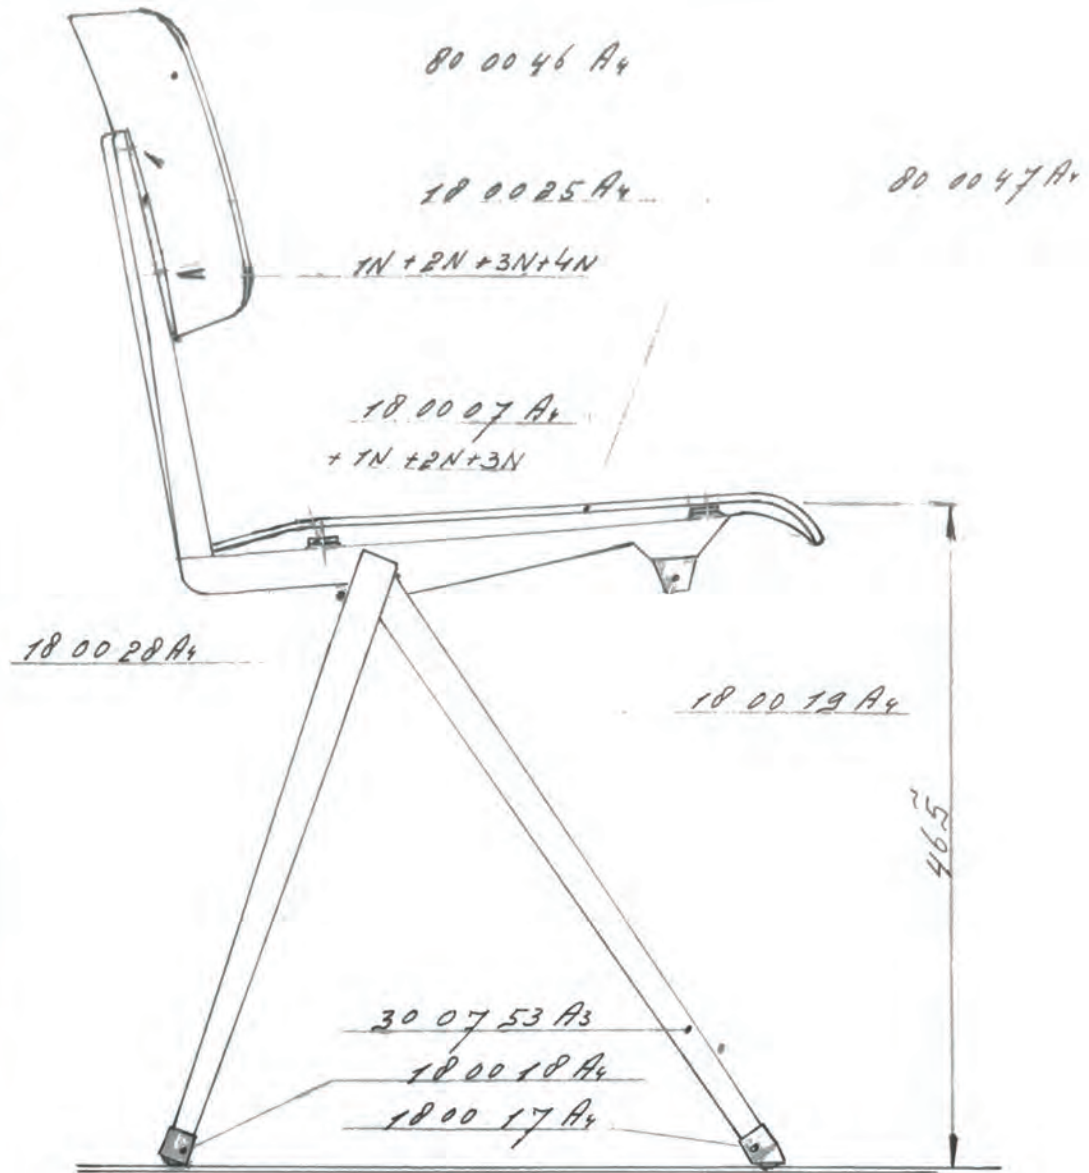

**THE ROUND FORMS GIVE  
THE MINO AN  
ACCESSIBLE AND WARM  
CHARACTER. YOU ARE  
REALLY INVITED  
TO TAKE A SEAT.**

# PAUL PHILIPSEN

The Galvanitas S-17 chair is entitled "style icon". The design, which is more current than ever, goes back to the fifties. The Galvanitas factory at the time provided the enormous demand for strong and lightweight furniture. Paul Philipsen, one of Galvanitas' designers, drew the design for 'the chair with the passing legs'.

## GALVANITAS S-17

The most obvious detail in the design is the chassis. Strong and lightweight because it consists of V-profiles and tubes. Technically perfect because the chassis makes the chair stackable. The carbonwood seat and back are pressed under extreme pressure and therefore slim in shape but extremely durable in use.

## GALVANITAS S-17

Thanks to the industrial and authentic look, the design of the S-17 is again very popular. The series has now been expanded and has a chair, armchair, bar stool and table. All with the same characteristic V-shape in the chassis.

## DIEDERIK SCHNEEMANN

After completing his education at the AKI Academy for Art & Design in Enschede, Diederik Schneemann started his own studio in Rotterdam. As a designer, in the broadest sense of the word, he designs design objects and products. He is surprised and inspired by the simple things in daily life.

## TUBE

The line pattern formed by the tube frame of the Tube gives the chair a striking appearance. In the design, attention to the straight lines and round shapes has been the main focus. The ingenuity of the construction is reflected in the connection between the backrest and the frame, which also provides a nice aesthetic detail.

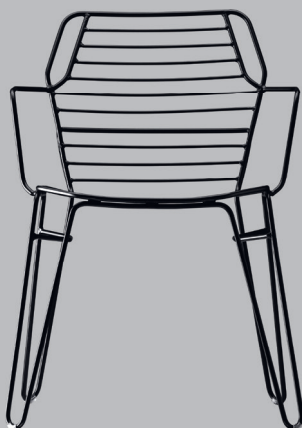

**MY WORK BALANCES  
BETWEEN ART AND  
DESIGN. I HAVE A PASSION  
FOR THE ART OF  
DESIGNING ANYTHING.**

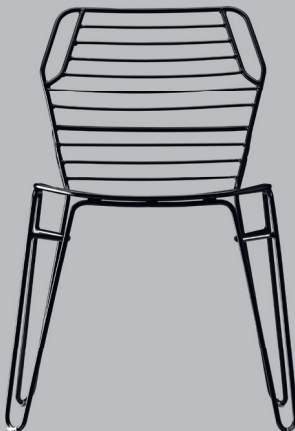

DIEDERIK SCHNEEMANN
